DEG Set by GOBP terms

CELL_TYPE
SEX

regulation of mRNA splicing, via spliceosome
transmembrane transporter activity
transmembrane transporter activity
dependent cell spreading
cell spreading
substrate adhesion
transporter activity
transmembrane transport
cell projection organization
involved in morphogenesis
projection morphogenesis
receptor signaling pathway
stress
cell migration
of cell polarity
cascade
system development
leukocyte differentiation
to nucleus
tube
to plasma membrane
signaling pathway
peroxidal ATP synthesis
reactions with bulged adenosine as nucleophile
potential
signaling pathway
and metabolic process
metabolic process
localization
transport
of organic compounds
cytotoxicity
and energy
assembly
organization
potential
membrane transport
electron transport
transduction
depolymerization
complex disassembly
organization
phosphorylation
maintenance
transport
transport
