DEG Set by GOBP terms
CELL_TYPE
SEX
mammary gland epithelium development
vascular endothelial growth factor signaling pathway
membrane depolarization during action potential
olfactory lobe development
neural crest cell development
neural crest cell migration
mesenchymal cell migration
regulation of neuron migration
Fc receptor signaling pathway
pigment biosynthetic process
proton transmembrane transport
respiratory electron transport chain
electron transport chain
proton motive force−driven ATP synthesis
aerobic respiration
energy derivation by oxidation of organic compounds
cellular respiration
neuron fate commitment
response to calcium ion
negative regulation of cytoskeleton organization
negative regulation of protein−containing complex disassembly
negative regulation of protein depolymerization
positive regulation of cation transmembrane transport
positive regulation of monoatomic ion transmembrane transport
positive regulation of monoatomic ion transport
positive regulation of transporter activity
positive regulation of ion transmembrane transporter activity
positive regulation of cation channel activity
regulation of JUN kinase activity
neuromuscular junction development
response to angiotensin
roof of mouth development
nephron development
establishment of cell polarity
establishment or maintenance of cell polarity
camera−type eye development
sensory system development
eye development
visual system development
B cell receptor signaling pathway
response to corticosteroid
response to glucocorticoid
cranial nerve development
cellular response to angiotensin
mammary gland development
wound healing
telencephalon development
renal system development
morphogenesis of an epithelium
epithelial tube morphogenesis
synapse organization
cell junction organization
tissue morphogenesis
nervous system development
anatomical structure morphogenesis
tube morphogenesis
tube development
central nervous system development
brain development
head development
regulation of endothelial cell migration
G protein−coupled receptor signaling pathway
endothelial cell migration
actin filament−based process
actin cytoskeleton organization
neurogenesis
neuron development
generation of neurons
neuron differentiation
neuron projection development
neuron projection morphogenesis
cell projection morphogenesis
plasma membrane bounded cell projection morphogenesis
cell morphogenesis involved in neuron differentiation
axonogenesis
cell fate commitment
regulation of G protein−coupled receptor signaling pathway
tube formation
positive regulation of endothelial cell migration
NAD metabolic process
carbohydrate catabolic process
pyridine−containing compound metabolic process
pyridine nucleotide metabolic process
nicotinamide nucleotide metabolic process
axon guidance
neuron projection guidance
purine nucleotide metabolic process
generation of precursor metabolites and energy
negative regulation of actin filament bundle assembly
cellular response to estradiol stimulus
negative regulation of stress fiber assembly
glycolytic process through fructose−6−phosphate
organic cation transport
natural killer cell mediated immunity
natural killer cell mediated cytotoxicity
response to hydrogen peroxide
positive regulation of RNA splicing
regulation of cholesterol metabolic process
regulation of alcohol biosynthetic process
regulation of cholesterol biosynthetic process
regulation of sterol biosynthetic process
RNA splicing
RNA splicing, via transesterification reactions
RNA splicing, via transesterification reactions with bulged adenosine as nucleophile
mRNA splicing, via spliceosome
protein−RNA complex assembly
regulation of RNA splicing
regulation of mRNA processing
regulation of mRNA splicing, via spliceosome
RNA processing
mRNA processing
mRNA metabolic process
RNA localization
nuclear export
regulation of nucleocytoplasmic transport
cellular response to UV
somatic stem cell population maintenance
miRNA processing
regulatory ncRNA processing
positive regulation of D−glucose transmembrane transport
regulation of intracellular protein transport
regulation of protein localization to nucleus
negative regulation of myeloid cell differentiation
positive regulation of intracellular protein transport
regulation of cell shape
regulation of lipid localization
regulation of cardiac muscle cell action potential
skeletal system morphogenesis
regulation of cell adhesion
cell−matrix adhesion
regulation of cell−matrix adhesion
detection of stimulus
B cell differentiation
regulation of myeloid cell differentiation
sensory organ development
positive regulation of cell population proliferation
animal organ morphogenesis
cell adhesion
positive regulation of cell differentiation
regulation of hemopoiesis
embryonic morphogenesis
regulation of cell morphogenesis
heart morphogenesis
cell−substrate adhesion
substrate adhesion−dependent cell spreading
regulation of substrate adhesion−dependent cell spreading
peripheral nervous system development
sex differentiation
regulation of peptidyl−threonine phosphorylation
lung epithelium development
cranial skeletal system development
embryonic skeletal system development
embryonic skeletal system morphogenesis
urogenital system development
nephron epithelium development
renal tubule development
nephron tubule development
renal tubule morphogenesis
negative regulation of cell−substrate adhesion
cartilage development
detection of external stimulus
detection of abiotic stimulus
ureteric bud development
mesonephros development
mesonephric epithelium development
mesonephric tubule development
regulation of cell−substrate adhesion
kidney epithelium development
negative regulation of osteoblast differentiation
cardiac muscle hypertrophy in response to stress
muscle hypertrophy in response to stress
cardiac muscle adaptation
regulation of osteoclast differentiation
regulation of myeloid leukocyte differentiation
neuronal stem cell population maintenance
digestive tract development
digestive system development
axis specification
