DEG Set by GOBP terms
CELL_TYPE
SEX
respiratory electron transport chain
electron transport chain
cellular respiration
energy derivation by oxidation of organic compounds
oxidative phosphorylation
aerobic respiration
ATP synthesis coupled electron transport
mitochondrial ATP synthesis coupled electron transport
proton transmembrane transport
mitochondrial fusion
proton motive force−driven ATP synthesis
proton motive force−driven mitochondrial ATP synthesis
regulation of translational initiation
translational initiation
protein targeting to mitochondrion
macromolecule catabolic process
pigment biosynthetic process
pigment metabolic process
regulation of potassium ion transmembrane transporter activity
membrane depolarization during action potential
regulation of membrane repolarization
neural crest cell development
neural crest cell migration
mesenchymal cell migration
regulation of neuron migration
Fc receptor signaling pathway
stem cell development
olfactory lobe development
morphogenesis of a polarized epithelium
tissue regeneration
positive regulation of potassium ion transport
NAD metabolic process
negative regulation of stress fiber assembly
glycolytic process through fructose−6−phosphate
response to calcium ion
neural precursor cell proliferation
cardiac muscle cell action potential
negative regulation of actin filament bundle assembly
cellular response to estradiol stimulus
positive regulation of monoatomic ion transport
positive regulation of transporter activity
positive regulation of ion transmembrane transporter activity
phenol−containing compound metabolic process
positive regulation of cation transmembrane transport
positive regulation of monoatomic ion transmembrane transport
negative regulation of cytoskeleton organization
negative regulation of supramolecular fiber organization
negative regulation of protein−containing complex disassembly
negative regulation of protein depolymerization
positive regulation of cation channel activity
regulation of JUN kinase activity
neuromuscular junction development
lactation
cell development
cell projection organization
plasma membrane bounded cell projection organization
anatomical structure morphogenesis
anatomical structure formation involved in morphogenesis
actin filament−based process
actin cytoskeleton organization
nervous system development
cell morphogenesis
neurogenesis
neuron development
generation of neurons
neuron differentiation
neuron projection development
regulation of actin filament−based process
G protein−coupled receptor signaling pathway
endothelial cell migration
cell morphogenesis involved in neuron differentiation
axonogenesis
regulation of endothelial cell migration
actin filament organization
neuron projection morphogenesis
cell projection morphogenesis
plasma membrane bounded cell projection morphogenesis
cell fate commitment
regulation of G protein−coupled receptor signaling pathway
tube formation
plasma membrane organization
synapse organization
regulation of body fluid levels
epithelial tube formation
embryonic epithelial tube formation
carbohydrate catabolic process
pyridine−containing compound metabolic process
pyridine nucleotide metabolic process
nicotinamide nucleotide metabolic process
generation of precursor metabolites and energy
purine nucleotide metabolic process
nucleotide metabolic process
positive regulation of endothelial cell migration
axon guidance
neuron projection guidance
establishment of cell polarity
establishment or maintenance of cell polarity
camera−type eye development
sensory system development
eye development
visual system development
roof of mouth development
hindbrain development
nephron development
regulation of p38MAPK cascade
wound healing
response to wounding
morphogenesis of an epithelium
tissue morphogenesis
epithelial tube morphogenesis
telencephalon development
tube morphogenesis
tube development
central nervous system development
brain development
head development
renal system development
kidney development
cell junction organization
cell junction assembly
positive regulation of cell population proliferation
cell population proliferation
sensory organ development
skeletal system development
animal organ morphogenesis
cell adhesion
response to angiotensin
branching morphogenesis of an epithelial tube
vascular transport
transport across blood−brain barrier
response to corticosteroid
response to glucocorticoid
B cell receptor signaling pathway
establishment of protein localization to plasma membrane
regulation of actin filament−based movement
neuron fate commitment
positive regulation of calcium ion transmembrane transporter activity
cellular response to angiotensin
mammary gland development
mammary gland epithelium development
vascular endothelial growth factor signaling pathway
cranial nerve development
nucleoside metabolic process
regulation of alcohol biosynthetic process
regulation of cholesterol biosynthetic process
regulation of sterol biosynthetic process
regulation of cholesterol metabolic process
positive regulation of RNA splicing
mRNA processing
regulatory ncRNA processing
response to hydrogen peroxide
cellular response to hydrogen peroxide
alternative mRNA splicing, via spliceosome
RNA splicing
RNA splicing, via transesterification reactions
RNA splicing, via transesterification reactions with bulged adenosine as nucleophile
mRNA splicing, via spliceosome
regulation of RNA splicing
protein−RNA complex assembly
protein−RNA complex organization
regulation of mRNA processing
regulation of mRNA splicing, via spliceosome
positive regulation of signal transduction
embryo development
cellular response to stress
DNA repair
DNA damage response
protein localization to nucleus
regulation of intracellular transport
nucleocytoplasmic transport
nuclear transport
RNA processing
mRNA processing
mRNA metabolic process
nuclear export
RNA localization
mRNA transport
regulation of cell morphogenesis
glycerophospholipid metabolic process
sex differentiation
myelination
ensheathment of neurons
axon ensheathment
regulation of intracellular protein transport
regulation of protein localization to nucleus
peripheral nervous system development
regulation of leukocyte migration
Schwann cell development
embryonic limb morphogenesis
embryonic appendage morphogenesis
positive regulation of D−glucose transmembrane transport
positive regulation of D−glucose import
somatic stem cell population maintenance
response to UV
regulation of nucleocytoplasmic transport
protein export from nucleus
response to osmotic stress
cellular response to UV
positive regulation of apoptotic signaling pathway
cellular response to light stimulus
fatty acid derivative metabolic process
fatty acid derivative biosynthetic process
regulation of Rac protein signal transduction
regulation of cell shape
regulation of lipid localization
negative regulation of lipid localization
positive regulation of lipid transport
regulation of cardiac muscle cell action potential
negative regulation of cell−substrate adhesion
postsynaptic specialization organization
natural killer cell mediated immunity
natural killer cell mediated cytotoxicity
organic cation transport
positive regulation of lipid localization
negative regulation of myeloid cell differentiation
positive regulation of intracellular protein transport
positive regulation of protein import into nucleus
formation of primary germ layer
reactive nitrogen species metabolic process
nitric oxide metabolic process
negative regulation of osteoblast differentiation
motile cilium assembly
regulation of cell−matrix adhesion
detection of stimulus
embryonic organ morphogenesis
embryonic morphogenesis
skeletal system morphogenesis
regulation of cell adhesion
cell−matrix adhesion
proteinogenic amino acid metabolic process
L−amino acid metabolic process
cartilage development
connective tissue development
regulation of osteoblast differentiation
positive regulation of cell differentiation
negative regulation of developmental process
regulation of myeloid cell differentiation
positive regulation of leukocyte differentiation
positive regulation of hemopoiesis
regulation of hemopoiesis
regulation of leukocyte differentiation
substrate adhesion−dependent cell spreading
regulation of substrate adhesion−dependent cell spreading
heart morphogenesis
cell−substrate adhesion
female sex differentiation
B cell differentiation
lung epithelium development
regulation of peptidyl−threonine phosphorylation
cholesterol efflux
mesoderm development
cranial skeletal system development
regulation of stem cell proliferation
embryonic skeletal system development
embryonic skeletal system morphogenesis
urogenital system development
renal tubule development
nephron tubule development
renal tubule morphogenesis
nephron epithelium development
nephron tubule morphogenesis
nephron epithelium morphogenesis
export across plasma membrane
detection of external stimulus
detection of abiotic stimulus
ureteric bud development
mesonephros development
mesonephric epithelium development
mesonephric tubule development
regulation of cell−substrate adhesion
kidney epithelium development
axis specification
chondrocyte differentiation
digestive tract development
digestive system development
anoikis
osteoclast differentiation
cardiac muscle hypertrophy in response to stress
muscle hypertrophy in response to stress
cardiac muscle adaptation
regulation of osteoclast differentiation
regulation of myeloid leukocyte differentiation
neuronal stem cell population maintenance
